

EXHIBIT A: GOD ROCKS! TECHNICAL RIDER

The Venue agrees to provide the following:

Stage Requirement: A 35 ft x 35 ft stage (raised to at least 36 inches) is required for a *God Rocks!* concert performance. If this is not available please contact the Technical Director (TD).

The *God Rocks!* Tour comes equipped with a 9 ft x 12 ft rear projection, fast fold screen. The projector is positioned center stage behind the screen and requires a distance of 15 ft from projector to screen for image coverage. There needs to be 15 extra ft in front of the screen to enable the performers to do the show.

We appreciate that stages vary in shape and size and that the area at the back of the stage is often constructed on multiple levels for choir and other use. Different levels do not present a problem for the screen and projector, but the 15 ft for the performers needs to be a flat surface stage.

If your venue already has a center screen of 9 x 12 ft or larger, or two side screens, the *God Rocks!* would love to use these screens instead of setting up their own. This may also help if the venue stage is not deep enough.

Sound: The *God Rocks!* Tour comes equipped with a state-of-the-art, digital audio and video system that is designed to feed into the venue's house audio system. The output of the *God Rocks!* mixer (2 x channels for the mains and 2 x channels for monitors) is provided for input into the venue's audio system.

The venue sound system should have a minimum of 2 x mains, 2 x subs and 4 x floor monitors with adequate power to provide "concert level" audio to the room.

If possible, we also request that the venue provide 2 x handheld microphones for use by the concert MC and for back-up. At all *God Rocks!* concerts we request that the main Sound Technician is available to show our technical team the set up, before and/or during the concert time.

Lighting: The lighting required for the *God Rocks!* stage performance depends on the size of the venue. Typically 8 lights per side gelled with diffusers, red, green, blue, and yellow is adequate. Lighting should come complete with dimmer packs and a lighting controller with sub groups, bump buttons and a master fader. The *God Rocks!* Tour comes equipped with a small lighting package that can be used to augment most church lighting systems. For larger venues, the *God Rocks!* may work with the lighting technical team to program scenes and use their lighting. If this is the case the *God Rocks!* require the Lighting tech to be available before and during the show.

Please confirm all arrangements with the God Rocks! Technical Director.
